

# **EXHIBIT B**

61. The CT studies selected for inclusion in the review were thoracic/chest studies, but the studies were not limited to those read by radiologists specializing in chest imaging. Eighteen out of the 25 control group studies were read by radiologists who did not specialize in chest imaging.

62. I selected Diana Litmanovich, M.D., to conduct the independent review. Dr. Litmanovich is a thoracic radiologist at Beth Israel Deaconess Medical Center and is a faculty member of Harvard Medical School. Dr. Litmanovich is not employed by the Medical Group or affiliated with the UMass Memorial Health system. I believe Dr. Litmanovich to be an expert in the interpretation of thoracic CT images.

63. I requested that Dr. Litmanovich review the images for each CT study and the corresponding report and provide her opinion whether she agreed or disagreed with the interpretation, and if she disagreed, to indicate whether it was a minor or major disagreement and whether or not the disagreement would have an impact on patient care in her opinion.

64. Dr. Litmanovich provided me with her findings, and I un-blinded them through reference to their identifying numbers. Based on the findings, Dr. Litmanovich concluded that of the reads conducted by Dr. Desai, there were five major errors and nine errors she opined would impact patient care. Dr. Litmanovich concluded that of the reads conducted by other radiologists, there was one major error and five errors she opined would impact patient care.

65. As a result of my assessment of the results of the independent review, I determined that Dr. Desai's quality was not acceptable for the Department, and I made the decision that Dr. Desai could not continue to work in the Department in order to ensure patient safety and provide high quality services to patients.
